

PC Building

We can custom build your PC to an exact specification or we can look into purchasing pre-built machines from DELL - if this is a requirement.

However custom building allows you to get the best components for each category, for example a quality motherboard to go with the best Graphics card.

Each PC we build is covered by the manufacturers 1 year warranty (or slightly more depending on the part purchased) and our own 3 month initial support package, which includes on-site and remote support. You can extend the cost for a year for an additional fee.
